

Know when your scheduled jobs silently stop

Quietcron watches cron jobs, queues and data pipelines and alerts when one runs late, runs long or never runs. One line of code per job, no agents to install.

GROSS MARGIN

RAISING \$1.8M

Heartbeats
Each job pings one URL when it finishes.

Schedules
We learn the expected cadence from history.

Alerts
Slack, PagerDuty or email when a run is missed.

Run logs
Last 90 days of output, searchable.

 **Made with MagicSlides**

WHY EXISTING TOOLS MISS IT

Monitoring tools watch servers, not schedules

A job that never starts produces no error, no log line and no metric. That is why missed backups and stale reports are found days later by a customer.

Primary Responsive Acceleration

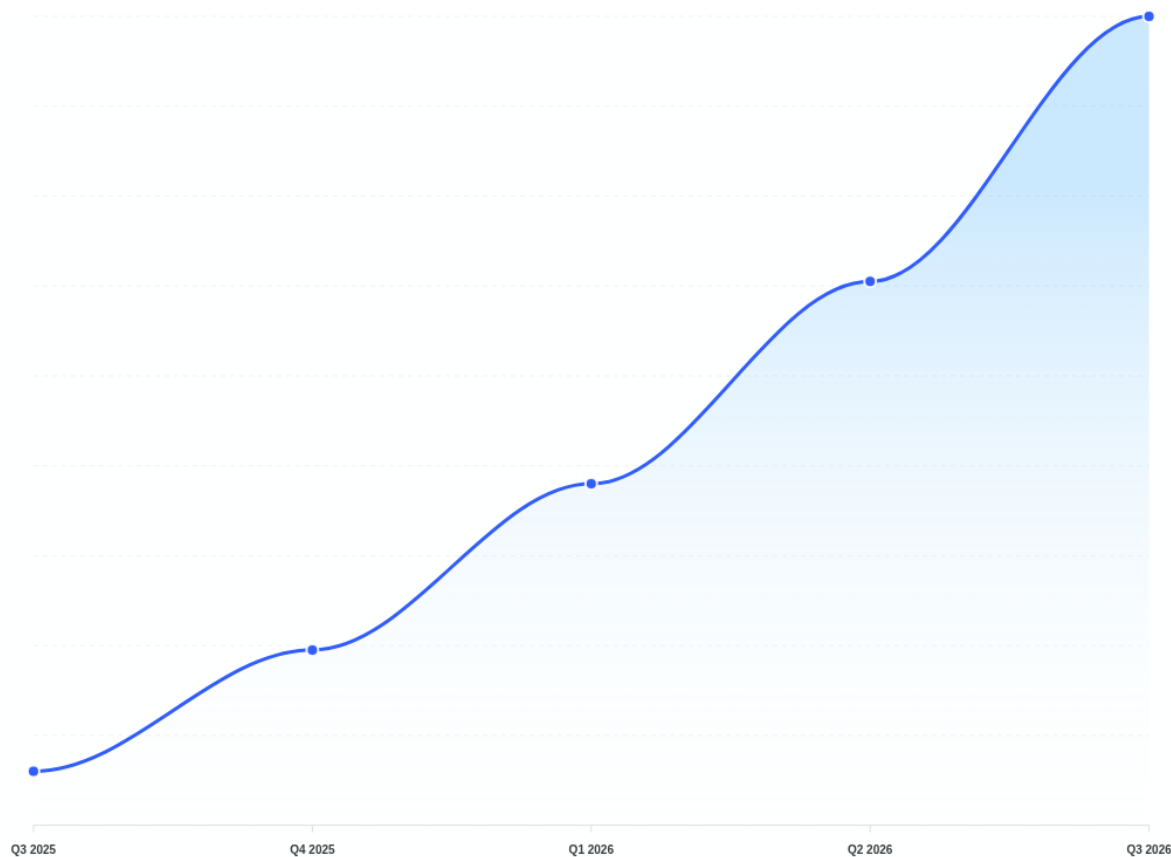

TOOL TYPE	CATCHES CRASH	CATCHES MISSED RUN	SETUP TIME
APM	Yes	No	Days
Log search	Yes	No	Hours
Uptime pinger	Partly	No	Minutes
Quietcron	Yes	Yes	2 minutes

Silence is the failure mode, so silence is what we alert on.

Bottom-up adoption, then paid teams

Monthly recurring revenue

Last 5 quarters

Developers start on the free plan with 20 jobs. Teams upgrade when they pass 20 jobs or add on-call routing.

Free to paid

6.1% of free workspaces convert within 90 days.

Net retention

128% as teams add more jobs.

Acquisition

72% of signups come from docs and search.

No paid acquisition spend to date.

PRODUCT

Built for the job you forgot you had

Quietcron works with any language or host because a job only needs to call a URL. SDKs add start and finish timings and capture output.

Any runtime

curl, Node, Python, Go and Ruby SDKs.

Smart grace periods

Learns normal run length and warns on slowdowns.

Config as code

Monitors defined in a YAML file next to the job.

Status pages

Share job health with customers or internal teams.

What the seed round funds

Five milestones over the next 18 months.

Q4 2026

Queue monitoring

Sidekiq, Celery and BullMQ backlog alerts.

Q1 2027

Pipeline checks

Airflow and dbt freshness monitors.

Q2 2027

Team plans

SSO, audit log and role-based access.

Q3 2027

Auto-discovery

Finds crontabs and Kubernetes CronJobs on its own.

Q1 2028

\$100k MRR

Target with 400 paying teams.

\$1.8M seed on a SAFE

Runway

24 months at planned burn.
